

C-MAP

NauticalCatalog

Save time by ordering ENC's and other C-MAP data quickly and easily online.

In an industry where time is money and safety is essential, it's worthwhile to streamline whenever possible. That's why C-MAP has replaced its Chart Catalog with a more efficient online version tailored to your needs. With our new C-MAP NauticalCatalog, you can order ENC's on the Internet at your convenience.

NauticalCatalog gives you a graphical view of chart coverage within a given product or database—including ENC, C-MAP PRIMAR ECDIS Service and C-MAP Professional+. You can import routes from your ECDIS/ECS, since NauticalCatalog supports 18 different route formats. In addition, you can auto-select charts for any route and calculate the aggregated cost.

Ordering is easy. NauticalCatalog guides you through the ordering process, selecting the right charts for your voyage or route. You can order chart licenses from your nominated chart distributor or directly from C-MAP. You can view and edit your orders, save order history, filter and sort charts in the catalog by type, name, license type, or expiration date. You can create and review orders for approval or licensing for another user. To make it easier to manage your business, you'll get reports of orders and costs incurred.

Here's how NauticalCatalog can save you time and increase your operation's efficiency and safety:

- Up-to-date: Easy, weekly access to updated chart databases—you'll always have the most up-to-date information
- Safe: Automatically incorporates relevant nautical information, and you'll spend less time ordering charts, which can result in safer navigation
- Flexible: You can use the suite of tools the way that most effectively meets your operational needs
- Accurate: Automatically picks charts that intersect any given route; and it exports and imports routes in 18 ECDIS/ECS formats
- Efficient: Order charts and receive license keys directly from C-MAP; plot routes manually or import routes from your ECDIS/ECS; and save a history of your orders
- Simple: Ordering tools are easy to use; you can view and edit your orders; and there's also a multi-user interface

Minimum System Requirements

- Fully Web-based
- Internet Explorer 8, Firefox 3.0, or later versions of these Web browsers
- Adobe Reader X or later versions (for printing)
